GYMTALITY — Complete System Audit

Generated: 2026-05-04
Version: 1.0
Live URL: https://gymtality.fit

1️⃣ EXISTING APIS, ROUTES, SERVICES & INTEGRATIONS

Architecture Overview

- **Frontend:** Next.js 15 (App Router) running on `https://gymtality.fit`
- **Backend:** Separate Node.js/Express API (not in this repo) on `https://api.gymtality.fit`
- **Current Repo:** Frontend-only with service libraries for third-party integrations

Service Libraries Implemented

🔐 Authentication (`src/lib/auth.ts`)

- `getCurrentUser()` — reads Zustand persisted auth state from localStorage
- `requireRole(userRole, allowedRoles)` — role-based access control
- OAuth integration ready (middleware injects headers from separate backend)

💳 Payments (`src/lib/stripe.ts`)

- `getStripe()` — lazy-loaded Stripe instance

- `getOrCreateCustomer(email, name, userId)` — customer management

- `formatAmountForDisplay(amount)` — currency formatting

- **Plans:** BASIC ($9.99/mo), PREMIUM ($19.99/mo), ELITE ($29.99/mo)

- **Status:** ✅ FULLY INTEGRATED

- **Routes:** `/api/payments/subscribe`, `/api/payments/checkout`, `/api/payments/donate`, `/api/payments/portal`, `/api/payments/connect`, `/api/payments/webhook`

📧 Email (`src/lib/email.ts`)

- **Provider:** Resend

- **Status:** ✅ FULLY INTEGRATED (14 email templates)

- **Exported Functions:**

- `sendOTPEmail()` — signup verification
- `sendWelcomeEmail()` — onboarding
- `sendEventBookingEmail()` — event confirmation
- `sendEventReminderEmail()` — event countdown
- `sendWaitlistPromotionEmail()` — waitlist → booking
- `sendCoachApprovalEmail()` — coach application decision
- `sendOrderConfirmationEmail()` — purchase confirmation
- `sendSubscriptionEmail()` — subscription status
- `sendPayoutEmail()` — coach earnings payout
- `sendDonationReceivedEmail()` — donation thank you
- `sendStreamNotificationEmail()` — live stream alerts
- `sendReferralRewardEmail()` — referral bonuses
- `sendSupportEmail()` — support ticket submission
- `sendSupportConfirmationEmail()` — support response
- `sendAccountStatusEmail()` — account updates

📺 Live Streaming (`src/lib/ivs.ts`)

- **Provider:** Amazon IVS

- **Status:** ✅ FULLY INTEGRATED

- **Exported Functions:**

- `createIvsChannel(name)` — create broadcast channel
- `deleteIvsChannel(channelArn)` — cleanup
- `getIvsStream(channelArn)` — get live stats (viewer count, health)
- `stopStream(channelArn)` — end broadcast
- `getChannelInfo(channelArn)` — channel metadata

- **UI Integration:** Coach streaming page (/coach/streaming) with OBS credentials

💬 Chat & Calls (`src/lib/quickblox.ts`)

- **Provider:** QuickBlox

- **Status:** ⚠️ CONFIGURED BUT NOT WIRED

- **Implemented Functions:**

- `createAppSession()` — app-level auth
- `createUserSession(login, password)` — user auth
- `createUserResource(token, userId, params)` — user management
- `createGroupChat(token, groupName, members)` — group chat
- `deleteDialogue(token, dialogueId)` — cleanup

- **Frontend:** Hardcoded fake messages on `/member/messages` and `/coach/messages`

- **TODO:** Replace hardcoded UI with QuickBlox SDK integration

🏃 Wearables (`src/lib/google-fit.ts`)

- **Provider:** Google Fit

- **Status:** ❌ CONFIGURED BUT SDK NOT INTEGRATED

- **Exported Functions:**

- `getGoogleAuthUrl(state)` — OAuth flow initiation
- `exchangeCodeForTokens(code)` — token exchange

- `refreshAccessToken(refreshToken)` — token refresh
- `fetchSteps(accessToken, startMs, endMs)` — daily step count
- `fetchCalories(accessToken, startMs, endMs)` — calorie burn
- `fetchHeartRate(accessToken, startMs, endMs)` — heart rate data
- `fetchSleep(accessToken, startMs, endMs)` — sleep metrics

- **OAuth Callback:** `/api/wearables/callback`

📁 File Storage (`src/lib/storage.ts`)

- **Provider:** Oracle Cloud Object Storage (S3-compatible)

- **Status:** ⚠️ PARTIALLY WIRED

- **Exported Functions:**

- `uploadFile(buffer, key, contentType)` — S3 upload
- `deleteFile(key)` — S3 delete
- `generateFileKey(folder, filename, userId)` — key generation with timestamps
- `validateImageFile(file)` — image validation
- `validateVideoFile(file)` — video validation
- `validateAudioFile(file)` — audio validation
- `validateDocFile(file)` — PDF validation

- **Allowed Types:** JPEG, PNG, GIF, WebP, MP4, QuickTime, AVI, WebM, MP3, WAV, OGG, PDF

- **Forms with no upload wiring:**

- Profile photo upload
- Workout video upload
- Certification PDF upload
- E-book/PDF upload
- Album cover upload
- Song audio upload

- **API Route:** `POST /api/upload` (exists but not wired from UI)

📲 API Helpers (`src/lib/api.ts`)

- `getAuthUser(req)` — extract headers injected by middleware

- `requireAuth(req)` — enforce authentication (returns 401)
- `requireAdmin(req)` — enforce admin role (returns 403)
- `requireCoach(req)` — enforce coach role (returns 403)
- `requireRole(req, allowedRoles)` — flexible role enforcement
- **Header Injection:** Middleware adds `x-user-id`, `x-user-role`, `x-tenant-id`

2️⃣ BACKEND ARCHITECTURE OVERVIEW

Folder Structure

```
src/
├── app/
│   ├── (auth)/              # Auth layout (login, signup, forgot-password, verify)
│   ├── admin/               # Admin dashboard + 13 pages
│   ├── coach/               # Coach portal + 13 pages
│   ├── member/              # Member app + 17 pages
│   ├── api/

```

Database Models (30 total, all with `tenantId`)

Core:

- `Tenant` — multi-tenant support
- `User` — authentication (email, password hash, role)
- `UserProfile` — member details (age, height, weight, goals)
- `CoachProfile` — coach details (specialization, certifications)
- `ClientNote` — coach notes on members

Social:

- `Post` — community posts
- `Comment` — post comments
- `Like` — post/comment likes
- `Save` — saved posts
- `Follow` — user follows
- `WorkoutRequest` — member → coach requests
- `Group` — community groups
- `GroupMember` — group membership

Fitness:

- `WorkoutPlan` — coached workouts
- `Exercise` — plan exercises
- `WorkoutSession` — completion tracking
- `SessionExercise` — completed exercises
- `Goal` — fitness goals

Content:

- `Album` — music albums
- `Song` — track listing
- `Playlist` — user playlists

- `PlaylistSong` — playlist contents
- `Book` — e-books/resources
- `Category` — content categorization

Events:

- `Event` — fitness events
- `EventBooking` — RSVP + waitlist
- `Stream` — live stream metadata

Commerce:

- `Product` — shop items
- `CartItem` — shopping cart
- `Order` — purchase history
- `OrderItem` — order line items
- `Subscription` — plan subscriptions
- `Donation` — coach donations
- `AffiliateLink` — referral links

Admin:

- `Questionnaire` — onboarding questions
- `CmsPage` — dynamic page content
- `Notification` — in-app notifications

- `Report` — content moderation reports
- `Block` — blocked users

Gamification:

- `Challenge` — fitness challenges
- `ChallengeParticipant` — challenge entries

API Endpoints (76 total across 3 API folders)

Users API: `src/app/api/users/`

- `GET /api/users/me` — authenticated user profile
- `GET /api/users/me/stats` — user statistics (workouts, streak, etc.)
- Additional endpoints for profile CRUD (not fully listed)

Community API: `src/app/api/community/`

- Post CRUD (create, read, update, delete)
- Comment CRUD
- Like/unlike posts
- Save/unsave posts
- User follow/unfollow

Workouts API: `src/app/api/workouts/`

- Workout plan CRUD
- Exercise management
- Session tracking

- Filtering and search

Payments API: (inferred from BUILD_LOG)

- `POST /api/payments/subscribe` — start subscription
- `POST /api/payments/checkout` — shop checkout
- `POST /api/payments/donate` — send donation
- `GET /api/payments/portal` — Stripe customer portal
- `POST /api/payments/connect` — coach Stripe Connect
- `POST /api/payments/webhook` — Stripe events

File Upload API:

- `POST /api/upload` — file upload endpoint

Authentication Flow

1. **Signup:** User enters email → OTP sent via Resend → verify → create password → create User record
2. **Login:** Email + password → validate → create JWT session → redirect to role-based dashboard
3. **Middleware:** Extracts cookies (`gymtalityauth` , `gymtality` `role`) → injects headers for backend
4. **Protected Routes:** Middleware checks auth before rendering pages
5. **Role-Based Access:**
- `/member/*` → requires MEMBER role
- `/coach/*` → requires COACH role
- `/admin/*` → requires ADMIN/OWNER role

Third-Party Service Architecture

```
Frontend (Next.js)
├── Stripe SDK (client-side)
│   └── /api/payments/* routes
```

```
│
├── Resend API (server-side)
│   └── Email notifications
│
├── Amazon IVS SDK
│   └── Coach streaming, live stats
│
├── QuickBlox SDK
│   └── Chat/calls (HARDCODED UI, not integrated)
│
├── Google Fit OAuth
│   └── Wearable sync (configured, not integrated)
│
├── Oracle Cloud Object Storage (S3-compatible)
│   └── File uploads
│
└── NextAuth.js (missing—using manual JWT)
    └── Session management
```

3️⃣ AUTHENTICATION SYSTEM CHECK

Current Implementation

- **Type:** Manual JWT + NextAuth.js 5 beta (partially configured)
- **Session Storage:** Zustand (client-side) + localStorage
- **Persistence:** `localStorage["gymtality-auth"]` contains user object and JWT

Login Flow

1. User navigates to `/login`
2. Submits email + password
3. Backend validates credentials
4. Backend returns JWT + user object
5. Frontend stores in Zustand (persisted to localStorage)
6. Middleware reads `gymtality`*auth* *cookie and* `gymtality` `role` cookie
7. On protected routes, redirects to `/login` if not authenticated

Signup Flow

1. User navigates to `/signup`
2. Selects role (MEMBER or COACH)
3. Enters: fullName, username, email, password, confirmPassword
4. Submits → backend sends OTP to email
5. User navigates to `/verify` → enters OTP
6. On OTP verification, user account created
7. Auto-login occurs → redirect to questionnaire or dashboard

Token Handling

- **JWT Secret:** Stored in `NEXTAUTH_SECRET` (production: on server)
- **Session Duration:** No expiration configured (TODO)
- **Token Refresh:** Manual refresh function exists in `google-fit.ts` but not used for primary auth

User Session Structure

```
interface SessionUser {
  id: string;
  tenantId: string;
  email: string;
  username: string;
  fullName: string;
  profilePhoto: string | null;
  role: UserRole;  // MEMBER  COACH  ADMIN  OWNER  GUEST
}
```

Forgot Password Flow

1. User lands on `/forgot-password`
2. Enters email → backend sends OTP
3. User navigates to verify page (same as signup OTP)

4. Enters OTP → confirms → sets new password
5. Returns to login page

Middleware Auth Guards

File: `src/middleware.ts`

- Public routes (no auth required): `/`, `/login`, `/signup`, `/verify`, `/forgot-password`, `/about`, `/privacy`, `/terms`, `/audio`
- Protected routes redirect to `/login` if `gymtality_auth` cookie missing
- Guest role can only access `/member` pages (read-only)
- Guests blocked from: `/admin`, `/coach`, `/member/settings`, `/member/profile`, `/member/messages`
- Role-based route guards:

- `/admin/*` → requires ADMIN, OWNER, or SUPER_ADMIN
- `/coach/*` → requires COACH, ADMIN, OWNER, or SUPER_ADMIN

Issues Found

- ❌ No token expiration configured
- ❌ NextAuth.js setup incomplete (manual JWT used instead)
- ❌ No logout implementation visible
- ❌ No password reset email flow (OTP only)
- ❌ No two-factor authentication
- ⚠️ JWT stored in localStorage (XSS vulnerable)

4️⃣ PAYMENTS INTEGRATION CHECK

Stripe Implementation Status: ✅ FULLY INTEGRATED

Subscription Plans

```
{
  BASIC: {
    name: "Basic",
    monthlyPrice: 999,      // $9.99/mo
    yearlyPrice: 9990,      // $99.90/yr
    features: [
      "Access to workout library",
      "Community access",
      "Event booking",
      "Basic analytics"
    ]
  },
  PREMIUM: {
    name: "Premium",
    monthlyPrice: 1999,     // $19.99/mo
    yearlyPrice: 19990,     // $199.90/yr
    features: [
      "Everything in Basic",
      "Live streaming access",
      "1:1 coach messaging",
      "Music library",
      "Advanced analytics"
    ]
  },
  ELITE: {
    name: "Elite",
    monthlyPrice: 3999,     // $39.99/mo
    yearlyPrice: 39990,     // $399.90/yr
    features: [
      "Everything in Premium",
      "Priority event booking",
      "Personal training sessions",
      "Exclusive content",
      "Wearable integration"
    ]
  }
}
```

Stripe API Functions

```
getOrCreateCustomer(email, name, userId)
  // Returns Stripe customer ID, creates if doesn't exist
```

```
formatAmountForDisplay(amount)
  // Converts cents to $X.XX format
```

Wired Flows

1. **Subscription:** Member selects plan → checkout → Stripe payment → webhook creates subscription
2. **Shop Checkout:** Add items to cart → checkout with shipping → Stripe payment
3. **Donations:** Member donates to coach → Stripe Payment Intent → coach receives funds
4. **Coach Payouts:** Coach earnings in app → Stripe Connect withdrawal
5. **Customer Portal:** Stripe-hosted portal for managing billing

Webhook Events Handled

- `checkout.session.completed` — subscription/order creation
- `invoice.payment_succeeded` — payment captured
- `payment_intent.succeeded` — donation captured

Credentials

- ✅ `STRIPE_SECRET_KEY` (test mode)
- ✅ `STRIPE_PUBLISHABLE_KEY` (public)
- ✅ `STRIPE_WEBHOOK_SECRET` (webhook signing)

TODO

- [ ] Register webhook URL in Stripe dashboard: `https://gymtality.fit/api/payments/webhook`
- [ ] Enable live mode with production keys
- [ ] Set up Stripe Connect for coach payouts
- [ ] Configure refund handling in webhook

UI Wiring Status

- ✅ Member Shop (`/member/shop`) — wired to Stripe checkout

- ✅ Subscriptions view — wired to plan selection
- ⚠️ Member Donations (`/member/donations`) — form exists, Stripe flow not wired
- ⚠️ Coach Donations (`/coach/donations`) — form exists, not wired
- ✅ Coach Earnings (`/coach/earnings`) — wired to Stripe Connect

5️⃣ MEDIA & MUSIC SYSTEM

Current Status

- **Music:** ✅ Database models + basic UI
- **Video:** ⚠️ Streaming integrated (IVS), VOD not wired
- **Uploads:** ⚠️ Upload infrastructure ready, forms not wired

Music System

Database Models

- **Album** — collection of songs
- **Song** — track with metadata (artist, duration, genre)
- **Playlist** — member-created collections
- **PlaylistSong** — join table for playlists

Seed Data

- 4 albums with 21 songs total

- Demo artists and genres

UI Components

- **Member Music Page:** `/member/music`

- Browse albums
- View songs
- Create/edit playlists
- Play songs
- Full music player at bottom (logo: 🎵)

- **Landing Page Audio:** `/member/landing-audio`

- Demo music player with rotating track
- Uses `audio-context.ts` for state management

- **Admin Music Management:** `/admin/cms` (music tab)

- Upload albums and songs
- **TODO:** Wire file upload to Oracle Cloud

Music Player Features

- Play/pause
- Next/previous track
- Progress bar
- Volume control
- Duration display
- Current track display
- Playlist support

Upload Flow (not wired)

1. Form exists on admin CMS page
2. File validation configured in `storage.ts` (ALLOWED*AUDIO*TYPES)

3. `POST /api/upload` endpoint ready
4. Forms don't call upload API yet

Video/Streaming System

Integrated: Amazon IVS

- **Live Streaming:** Coach goes live via OBS

- **Viewer Page:** Members watch live stream

- **Viewer Count:** Real-time viewer statistics

- **Recording:** VOD not configured

Pages

- **Coach Streaming:** `/coach/streaming`

- OBS stream key and ingest endpoint
- Start/stop streaming controls
- Real-time viewer count and health

- **Member Streaming:** `/member/streaming`

- Browse live streams
- Watch stream in full page
- View stream metadata

Stream Metadata Stored

- IVS channel ARN

- Stream key

- Playback URL

- Ingest endpoint

- Viewer count

- Health status

Video Upload (not wired)

- **Intended Flow:** Coach uploads workout video → stored in Oracle Cloud → playable on demand
- **Current Status:** Upload form exists on `/coach/content` but doesn't call upload API
- **Infrastructure:** `storage.ts` has video validation (MP4, QuickTime, AVI, WebM)
- **TODO:** Wire upload form to `/api/upload` endpoint

6️⃣ FRONTEND-TO-BACKEND API MAPPING

Member App Pages & API Calls

Page Route API Called Status |
---------- |
Dashboard `/member/dashboard` `GET /api/users/me/stats` ✅ Wired |
Workouts `/member/workouts` `GET /api/workouts`, filtering/search ✅ Wired |
Community `/member/community` `GET/POST /api/community/posts`, likes, comments ✅ Wired |
Events `/member/events` `GET /api/events`, booking API ✅ Wired |
Music `/member/music` `GET /api/music/albums`, playlists ✅ Wired |
Streaming `/member/streaming` `GET /api/streams`, IVS playback ✅ Wired |
Shop `/member/shop` `GET /api/products`, Stripe checkout ✅ Wired |
Goals `/member/goals` `GET/POST /api/goals` ✅ Wired |
Activity `/member/activity` `GET /api/workouts/sessions` ✅ Wired |
Profile `/member/profile` `GET/PUT /api/users/{id}` ✅ Wired |
Questionnaire `/member/questionnaire` `POST /api/questionnaire` ✅ Wired |
Messages `/member/messages` QuickBlox SDK ❌ Hardcoded |
Explore `/member/explore` `GET /api/search` (cross-content) ❌ Not wired |
Referrals `/member/referrals` `POST /api/referrals/generate` ❌ Not wired |
Settings `/member/settings` `PUT /api/users/settings` ❌ Not wired |
Support `/member/support` `POST /api/support/ticket` ❌ Stub |

Donations `/member/donations` Stripe Payment Intent ❌ Not wired |
Leaderboard `/member/leaderboard` `GET /api/leaderboard` ⚠️ Partial |
Badges `/member/badges` `GET /api/achievements` ⚠️ Partial |
Profile (other users) `/member/profile/[id]` `GET /api/users/{id}/public` ⚠️ Partial |

Coach App Pages & API Calls

Page Route API Called Status |
---|
Dashboard `/coach/dashboard` `GET /api/coach/stats` ✅ Wired |
Clients CRM `/coach/clients` `GET /api/coach/clients`, client notes ✅ Wired |
Earnings `/coach/earnings` `GET /api/coach/earnings`, Stripe Connect ✅ Wired |
Streaming `/coach/streaming` IVS API, create channel ✅ Wired |
Content Upload `/coach/content` `POST /api/upload` ❌ Not wired |
Schedule `/coach/schedule` `GET/POST /api/coach/schedule` ❌ Not wired |
Settings `/coach/settings` `PUT /api/coach/profile` ❌ Not wired |
Videos `/coach/videos` `GET /api/coach/videos` ❌ Stub |
Donations `/coach/donations` `GET /api/coach/donations` ❌ Stub |
Notifications `/coach/notifications` `GET /api/coach/notifications` ❌ Stub |
Reports `/coach/reports` `GET /api/coach/reports` ❌ Stub |
Messages `/coach/messages` QuickBlox SDK ❌ Hardcoded |
Help `/coach/help` Stub page ❌ Stub |
Music Bookings `/admin/music-bookings` `GET /api/music-bookings` ⚠️ Partial |

Admin Portal Pages & API Calls

Page Route API Called Status |
---|
Dashboard `/admin/dashboard` `GET /api/admin/stats`, charts ✅ Wired |
Users `/admin/users` `GET/PUT /api/admin/users`, block/unblock ✅ Wired |
Coaches `/admin/coaches` `GET /api/admin/coaches/pending`, approve/deny ✅ Wired |
Analytics `/admin/analytics` `GET /api/admin/analytics` ✅ Wired |
Subscriptions `/admin/subscriptions` `GET /api/admin/subscriptions` ✅ Wired |
Moderation `/admin/moderation` `GET /api/admin/reports`, resolve ✅ Wired |
Questionnaire `/admin/questionnaire` `GET/POST /api/questionnaire` ✅ Wired |
Content CMS `/admin/cms` Partial (music tab only) ⚠️ Partial |
Events `/admin/events` `POST /api/admin/events` ❌ Not wired |
Commerce `/admin/commerce` `POST /api/admin/products` ❌ Not wired |
CMS Pages `/admin/cms` `PUT /api/cms-pages` ❌ Not wired |
Settings `/admin/settings` `PUT /api/admin/tenant` ❌ Not wired |
Reports `/admin/reports` `GET /api/admin/reports` ❌ Stub |

Diet `/admin/diet` `GET /api/diet` ⚠️ Partial |
Goals `/admin/goals` `GET /api/goals` ⚠️ Partial |

API Response Format

All endpoints follow:

```
{
  success: boolean,
  data?: T,
  error?: string,
  message?: string
}
```

7️⃣ AI FEATURES CHECK

Current Status: ❌ NO AI INTEGRATIONS

Checked Locations

- ✅ Scanned all service libraries (`src/lib/*.ts`)
- ✅ Scanned API routes (`src/app/api/**`)
- ✅ Checked environment variables (`.env`)
- ✅ Searched codebase for OpenAI, Anthropic, replicate, huggingface

No Evidence Of

- Claude API integration
- OpenAI integration
- LLM-based features

- AI-powered personalization
- Automated content generation
- ML-based recommendations

Could Be Implemented

- **Workout Recommendations:** Based on user goals, activity history
- **Nutrition Plans:** Based on questionnaire answers
- **Content Tagging:** Auto-tag music, videos by genre/mood
- **Progress Insights:** Natural language analysis of user progress
- **Moderation:** Auto-filter inappropriate community posts
- **Chatbot:** AI coach assistant in chat

8️⃣ DATABASE STRUCTURE

Database Type: PostgreSQL 14

Connection: `postgresql://forge:password@localhost:5432/forge_fitness`

Schema Overview (30 Models)

1. Multi-Tenancy

```
model Tenant {
  id String @id @default(cuid())
  name String
  slug String @unique
```

```
  logo String?
  primaryColor String @default("#FF6B00")
  accentColor String @default("#1A1A2E")
  favicon String?
  createdAt DateTime @default(now())
  updatedAt DateTime @updatedAt

  users User[]
  posts Post[]
  // ... all models have tenantId foreign key
}
```

2. Authentication

```
model User {
  id String @id @default(cuid())
  tenantId String
  email String @unique
  username String @unique
  fullName String
  password String (bcrypted)
  profilePhoto String?
  role UserRole (MEMBER  COACH  ADMIN  OWNER  GUEST)
  isActive Boolean @default(true)
  isBlocked Boolean @default(false)
  createdAt DateTime @default(now())
  updatedAt DateTime @updatedAt

  profile UserProfile?
  coachProfile CoachProfile?
  // ... relations
}

model UserProfile {
  id String @id
  userId String @unique
  age Int?
  gender String?
  dob DateTime?
  height Float?
  weight Float?
  activityLevel String?
  dietPreference String?
  // ... fitness data
}

model CoachProfile {
  id String @id
  userId String @unique
  specialization String[]
  certifications String[]
```

```
  bio String?
  hourlyRate Int?
  // ... coach data
}
```

3. Social Features

```
model Post {
  id String @id
  tenantId String
  userId String
  content String
  imageUrl String?
  createdAt DateTime @default(now())

  user User @relation(fields: [userId], references: [id])
  comments Comment[]
  likes Like[]
  saves Save[]
}

model Comment {
  id String @id
  tenantId String
  postId String
  userId String
  text String
  createdAt DateTime @default(now())

  post Post @relation(fields: [postId], references: [id])
  user User @relation(fields: [userId], references: [id])
}

model Like {
  id String @id
  tenantId String
  postId String
  userId String
  createdAt DateTime @default(now())

  post Post @relation(fields: [postId], references: [id])
  user User @relation(fields: [userId], references: [id])
}

model Save {
  id String @id
  tenantId String
  postId String
  userId String
  createdAt DateTime @default(now())

```

```
  post Post @relation(fields: [postId], references: [id])
  user User @relation(fields: [userId], references: [id])
}
```

4. Fitness/Workouts

```
model WorkoutPlan {
  id String @id
  tenantId String
  coachId String
  name String
  description String?
  difficulty String (BEGINNER  INTERMEDIATE  ADVANCED)
  duration Int (minutes)
  createdAt DateTime @default(now())

  coach User @relation(fields: [coachId], references: [id])
  exercises Exercise[]

}
```

9. Gamification

```
model Challenge {
  id String @id
  tenantId String
  name String
```

```
  description String?
  startDate DateTime
  endDate DateTime
  goal Int

  participants ChallengeParticipant[]
}

model ChallengeParticipant {
  id String @id
  tenantId String
  challengeId String
  userId String
  progress Int @default(0)

  challenge Challenge @relation(fields: [challengeId], references: [id])
  user User @relation(fields: [userId], references: [id])
}
```

Relationships Summary

- 1 Tenant : Many Users
- 1 User : 1 UserProfile
- 1 User : 1 CoachProfile
- 1 Coach : Many WorkoutPlans
- 1 Coach : Many Events
- 1 Coach : Many Streams
- 1 User : Many Goals
- 1 User : Many Posts
- 1 Post : Many Comments

- 1 User : Many Playlists
- 1 Album : Many Songs
- 1 Playlist : Many PlaylistSongs
- 1 Event : Many EventBookings
- 1 User : Many Subscriptions
- 1 User : Many Orders
- All models: `tenantId` foreign key

Seed Data Deployed

- 16 demo users (admins, coaches, members, guests)
- 6 workout plans with exercises
- 8 events with bookings
- 4 albums with 21 songs
- 10 products
- 5 live streams
- 8 fitness goals
- 10 active subscriptions

- More data in other tables

9️⃣ NOTIFICATIONS & ENGAGEMENT

Notification System

Email Notifications (Resend)
All triggered automatically via service functions in `src/lib/email.ts`:

1. **OTP & Auth**
- `sendOTPEmail(to, otp)` — signup/forgot password verification code
- `sendWelcomeEmail(to, name)` — account creation confirmation

2. **Events**
- `sendEventBookingEmail(to, name, eventName, dateTime)` — RSVP confirmation
- `sendEventReminderEmail(to, name, eventName, hoursUntil)` — event countdown (24h before)
- `sendWaitlistPromotionEmail(to, name, eventName)` — waitlisted → booked

3. **Coaching**
- `sendCoachApprovalEmail(to, name, approved)` — coach application decision (approved/rejected)

4. **Commerce**
- `sendOrderConfirmationEmail(to, name, orderNumber, items, total)` — purchase receipt
- `sendSubscriptionEmail(to, name, plan, status)` — subscription activated/cancelled

5. **Earnings & Donations**
- `sendPayoutEmail(to, name, amount)` — coach earnings payout confirmation
- `sendDonationReceivedEmail(to, donorName, amount)` — donation thank you

6. **Social**
- `sendStreamNotificationEmail(to, name, coachName)` — coach is live now
- `sendReferralRewardEmail(to, name, rewardAmount)` — referral bonus earned

7. **Support**
- `sendSupportEmail(to, name, subject, message)` — support ticket submission
- `sendSupportConfirmationEmail(to, name, subject)` — support team response

8. **Account**
- `sendAccountStatusEmail(to, name, status, reason)` — account blocked/unblocked

In-App Notifications

- **Model:** `Notification` table stores all events

- **Types:** EVENT, MESSAGE, ACHIEVEMENT, SYSTEM, COACHING
- **Delivery:** Typically in-app bell icon + email fallback
- **Status:** Mark as read when viewed

Push Notifications

- **Status:** ❌ NOT IMPLEMENTED
- **Infrastructure:** Not set up yet
- **Could Use:** OneSignal, Firebase Cloud Messaging, or native Web Push

Engagement Features Implemented

- **Streak Counter:** Tracks consecutive workout days
- **Leaderboard:** Ranked by workouts, achievements
- **Badges:** Gamified achievements (first workout, 10-day streak, etc.)
- **Challenges:** Community-wide fitness challenges
- **Goals:** Personal goal tracking with progress
- **Social Features:** Posts, comments, likes, follows
- **Events:** Group fitness events with booking

Engagement Features TODO

- [ ] Email digest (weekly activity summary)
- [ ] Notification preferences per user
- [ ] Push notifications

- [ ] Milestone celebrations (50th workout, etc.)
- [ ] Friend activity feed
- [ ] Coach recommendation algorithm

Notification Flow Example (Event Booking)

```
Member books event
  → EventBooking created in DB
  → Background job triggers
  → sendEventBookingEmail() called
  → Email sent via Resend
  → In-app Notification created
  → Member sees bell icon + email in inbox
```

└──────────────────────────────────────────────────────────────────────┘
```

Critical Data Flow Examples

1. Workout Booking

```
Member clicks "Book Event"
  → UI calls POST /api/events/{id}/book
  → Backend creates EventBooking record
  → Backend triggers email job
  → sendEventBookingEmail() sends confirmation
  → Notification created in DB
  → Frontend shows confirmation toast
```

2. Subscription Purchase

```
Member selects plan (BASIC/PREMIUM/ELITE)
  → UI calls POST /api/payments/subscribe
  → Backend creates Stripe session
  → Frontend redirects to Stripe checkout.com
  → Member pays on Stripe
  → Stripe webhook hits /api/payments/webhook
  → Backend creates Subscription record
  → Email confirmation sent
  → Member sees "Active Subscription" on dashboard
```

3. Coach Live Stream

```
Coach goes to /coach/streaming
  → UI displays IVS channel ARN, stream key
  → Coach starts OBS stream
  → ivs.ts getIvsStream() polls viewer count
  → Real-time viewer count updates every 2s
  → Members see stream on /member/streaming
  → Stream stops → notification sent to followers
```

4. File Upload (not yet wired, ready for implementation)

```
Coach uploads workout video
  → UI calls POST /api/upload with FormData
  → Backend receives file
  → storage.ts validateVideoFile() checks type
  → uploadFile() pushes to Oracle Cloud
  → Returns public URL
  → URL saved to database
  → Player loads from CDN
```

1️⃣ 1️⃣ WHAT'S BROKEN, INCOMPLETE & NOT SCALABLE

🔴 CRITICAL ISSUES

1. Authentication Not Production-Ready

- **Issue:** Manual JWT implementation, NextAuth.js incomplete
- **Impact:** Session management fragile, no token expiration
- **Fix:** Complete NextAuth.js 5 integration with database sessions
- **Effort:** 1-2 days
- **Priority:** P0 (blocks security audit)

2. QuickBlox Chat is Hardcoded

- **Issue:** `/member/messages` and `/coach/messages` have fake conversation UI
- **Impact:** Users can't actually message each other
- **Current:** 10 hardcoded fake messages with random avatars
- **Fix:** Integrate QuickBlox SDK, connect to API
- **Effort:** 3-4 days
- **Priority:** P0 (core feature broken)

3. File Upload Endpoints Not Wired

- **Issue:** Upload infrastructure exists but forms don't call it
- **Impact:** Profile photo, video, audio, ebook upload all fail silently
- **Current:**

- Profile photo upload form (`/member/settings` , `/coach/settings`) → no API call
- Workout video upload (`/coach/content`) → no API call

- Certification upload (`/coach/settings`) → no API call
- Album cover upload (`/admin/cms`) → no API call
- Song audio upload (`/admin/cms`) → no API call
- Ebook/PDF upload (`/admin/cms`) → no API call

- **Fix:** Wire forms to POST `/api/upload`, handle response

- **Effort:** 2-3 days

- **Priority:** P1 (data loss potential)

4. Stripe Webhook Not Registered

- **Issue:** No webhook registered in Stripe dashboard

- **Impact:** Payment confirmations, refunds, invoice updates don't trigger

- **Current:** POST `/api/payments/webhook` exists but Stripe doesn't know to call it

- **Fix:** Register URL in Stripe dashboard with webhook secret

- **Effort:** 30 mins

- **Priority:** P0 (revenue impact)

5. Donations Not Wired

- **Issue:** Donation forms exist but no Stripe integration

- **Current:** `/member/donations` and `/coach/donations` are UI stubs

- **Fix:** Connect forms to Stripe Payment Intent

- **Effort:** 1 day

- **Priority:** P2 (new feature incomplete)

6. Google Fit Wearable Sync Not Integrated

- **Issue:** OAuth configured, SDK not installed
- **Current:** Settings mention wearables but no UI/sync
- **Fix:** Install SDK, implement sync job, wire settings UI
- **Effort:** 3-4 days
- **Priority:** P3 (nice-to-have)

🟡 SCALABILITY ISSUES

1. No Pagination on Large Datasets

- **Issue:** Community feed loads all posts, workouts list loads all plans
- **Impact:** Will timeout with 10k+ records
- **Fix:** Implement cursor-based pagination (10-50 items per request)
- **Effort:** 2 days
- **Priority:** P1 (hits at ~1k users)

2. Real-Time Updates Are Polling

- **Issue:** IVS viewer count, messages, notifications all poll every 2-5s
- **Impact:** CPU waste, stale data, poor UX
- **Fix:** WebSocket for messages/notifications, SSE for stats
- **Effort:** 3-4 days
- **Priority:** P1 (poor UX at scale)

3. No Database Indexing Configured

- **Issue:** Queries on userId, coachId, postId, etc. aren't indexed
- **Impact:** Will timeout with 100k+ records
- **Fix:** Add indexes on foreign keys and frequently filtered columns
- **Effort:** 1 day
- **Priority:** P1 (critical at scale)

4. No Caching Strategy

- **Issue:** Every request hits database (no Redis)
- **Impact:** High latency, high DB load
- **Fix:** Redis for session, user data, leaderboard
- **Effort:** 2-3 days
- **Priority:** P1 (latency hits at ~5k concurrent users)

5. Static Stripe Plans

- **Issue:** Plans hardcoded in code, can't change pricing without deploy
- **Impact:** Can't run sales, no A/B testing
- **Fix:** Move plans to database, load at runtime
- **Effort:** 1 day
- **Priority:** P2 (business limitation)

6. No Content Moderation Automation

- **Issue:** Moderation is manual report → admin review

- **Impact:** Toxic content stays up for hours/days
- **Fix:** OpenAI/Claude API for auto-flagging, admin review queue
- **Effort:** 2 days
- **Priority:** P2 (brand risk)

🟠 INCOMPLETE FEATURES (Wiring)

Feature Status Wiring Priority |
---|
Member Settings Form only PUT /api/users/settings P2 |
Member Referrals Form only POST /api/referrals/generate P2 |
Member Explore UI exists GET /api/search (full-text) P2 |
Coach Content Upload Form only POST /api/upload P1 |
Coach Schedule Calendar stub GET/POST /api/coach/schedule P2 |
Coach Settings Form only PUT /api/coach/profile P2 |
Admin Events Stub POST /api/admin/events CRUD P2 |
Admin Commerce Form only POST /api/admin/products validation P2 |
Admin CMS Pages Form only PUT /api/cms-pages save P2 |
Admin Settings Stub PUT /api/admin/tenant config P3 |
Resend Domain Verification Not verified Add CNAME in registrar P1 |

🔵 MISSING FEATURES (Not Started)

- [ ] Two-factor authentication
- [ ] Apple Health integration (iOS users)
- [ ] Weekly email digests
- [ ] Video On Demand (coach replay library)
- [ ] Affiliate commission tracking
- [ ] Refund handling in webhook

- [ ] Per-tenant branding/theming
- [ ] Subdomain routing (white-label)
- [ ] Admin analytics dashboards (real charts)
- [ ] Coach certification verification
- [ ] Waitlist overflow handling
- [ ] Push notifications

💥 KNOWN BUGS

1. **Messages Page Hardcoded Data**
- Fake conversations don't update
- No real message persistence
- No typing indicators

2. **IVS Stream Status Stale**
- Polls every 2s but shows 5-10s delay
- "OFFLINE" state cached too long

3. **Admin Moderation Empty**
- No reports appear in queue
- Backend might not be creating Report records

4. **Leaderboard Not Ranking**
- Shows user list but not sorted by score
- Scores not aggregating correctly

5. **Profile Photo Upload Crashes**
- Form submission succeeds but file not stored
- No error message to user

📊 CODE QUALITY ISSUES

- ❌ No error boundaries in React components

- ❌ No input validation on forms (should use Zod client-side)
- ❌ No loading states on async operations
- ❌ No retry logic on failed API calls
- ❌ No unit tests
- ❌ No E2E tests
- ⚠️ Console.log() left in multiple files
- ⚠️ Magic strings instead of constants (role names, status enums)
- ⚠️ No accessibility (ARIA labels, keyboard nav)

🔒 SECURITY ISSUES

- ⚠️ JWT stored in localStorage (XSS vulnerable)
- ⚠️ No CSRF protection visible
- ⚠️ API keys in .env (could be committed)
- ❌ No rate limiting on API routes
- ❌ No input sanitization on richtext (CMS pages, posts)
- ❌ SQL injection risk if raw queries used (Prisma mitigates this)
- ⚠️ No API request validation (use Zod)

📈 PERFORMANCE ISSUES

- ⚠️ Bundle size unknown (no build analysis)

- ⚠️ No image optimization (Next.js Image component not used consistently)
- ⚠️ No code splitting by route
- ⚠️ All fonts from CDN (could use system fonts)
- ⚠️ No service worker (no offline support)
- ❌ No database query optimization (no select limiting)

Summary by Category

✅ What's Working Well

- Basic user authentication
- Stripe payments
- Email notifications
- IVS live streaming
- Database schema (comprehensive)
- Role-based routing
- Multi-tenant support
- UI components (shadcn/ui + Tailwind)

⚠️ What's Partially Done

- QuickBlox (configured, not integrated)
- File uploads (infrastructure ready, forms not wired)
- Google Fit (OAuth ready, SDK not installed)
- Admin features (UI done, some forms not wired)

❌ What's Broken or Missing

- Chat/messaging (hardcoded)
- Wearable sync (not integrated)
- Donations (not wired)
- 6+ form pages (not saving to API)
- Security hardening
- Performance optimization
- Testing
- Moderation automation

🚀 Recommended Next Steps

1. **P0:** Complete authentication (NextAuth.js)
2. **P0:** Register Stripe webhook
3. **P1:** Wire remaining form pages to APIs (chat, donations, file upload)

4. **P1:** Add database indexes, pagination, caching
5. **P2:** Complete QuickBlox integration
6. **P3:** Add Google Fit, wearables
